Specialized Infant Feeding Guidelines for

Healthcare Professionals

The Oregon Pediatric Nutrition Practice Group has developed an exciting resource for dietitians across the country. The brochure, "Specialized Infant Feeding Guidelines for Healthcare Professionals" was developed to help answer questions, provide a standard approach to concentrating formula and lessen confusion.

This helpful resource also outlines:

- Indications and contraindications for commercially available infant formulas.
- Reasons for increasing caloric density of formula.
- Issues to consider when evaluating etiology of poor growth and/or weight gain.
